LEGAL NOTICE

A Camelcoin does not represent a business's ownership or equity but rather represents its utilitarian value, as described in the Camelcoin white paper. The white paper's information may be incomplete, and while we make every effort to ensure its accuracy and updating, it does not constitute a professional document in any way.

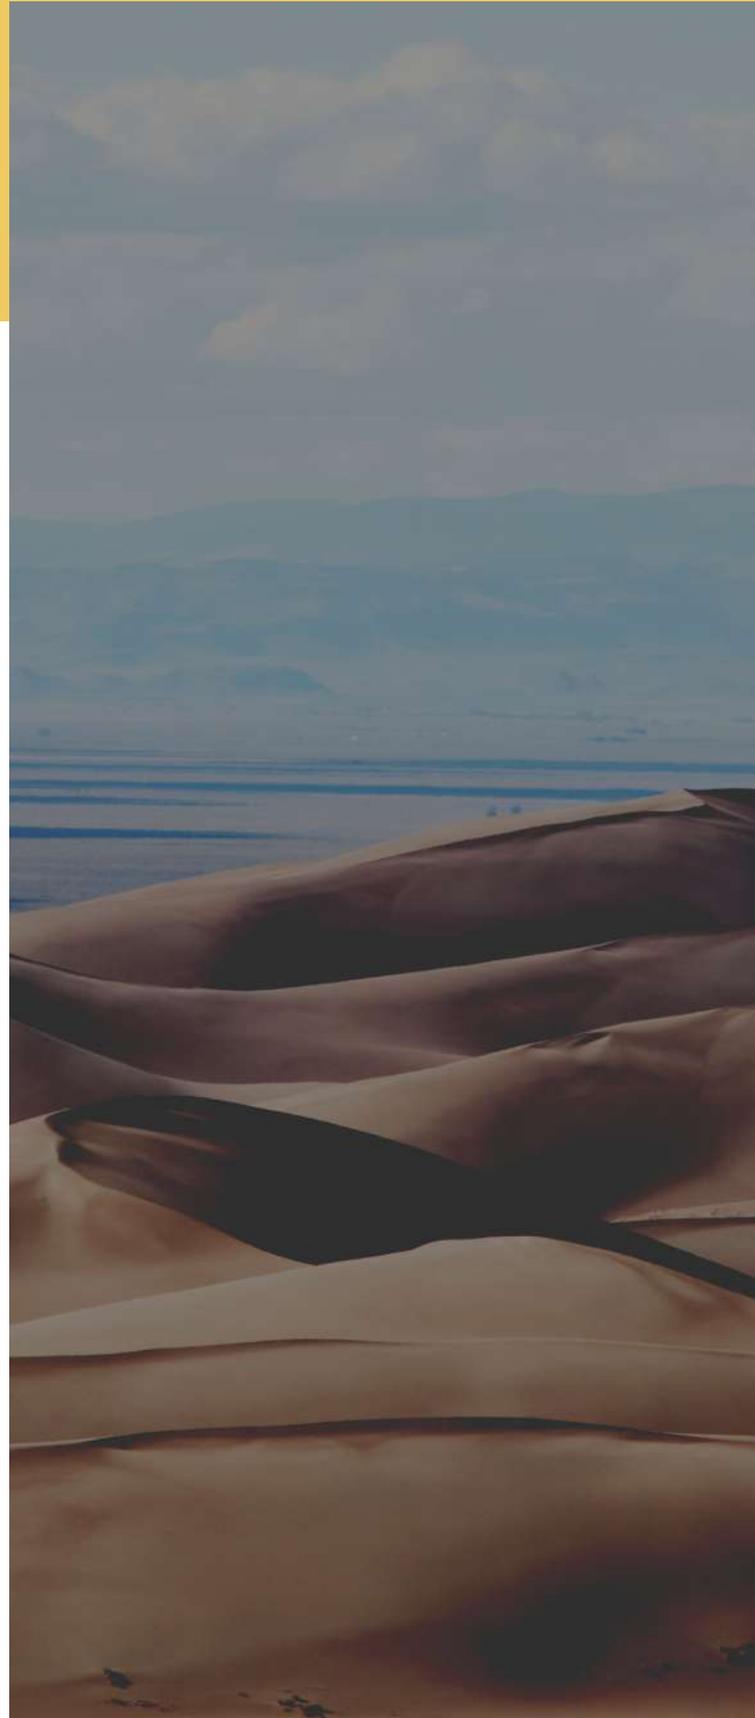

Camelcoin does not guarantee or accept any legal liability arising from, or in connection with, the accuracy, reliability, topicality, or completeness of the information.

Potential holders of tokens or corners must seek an independent professional's advice before making a transaction based on the information published in this white paper.

The information is published only as a reference. In any case, Camelcoin cannot refund token buyers through sales made during the ICO.

Camelcoin is not intended to generate securities in any jurisdiction.

This white paper is not a prospectus, a public offer, or a purchase document and does not intend to form an offer of securities or an invitation to an investment in securities in any jurisdiction.

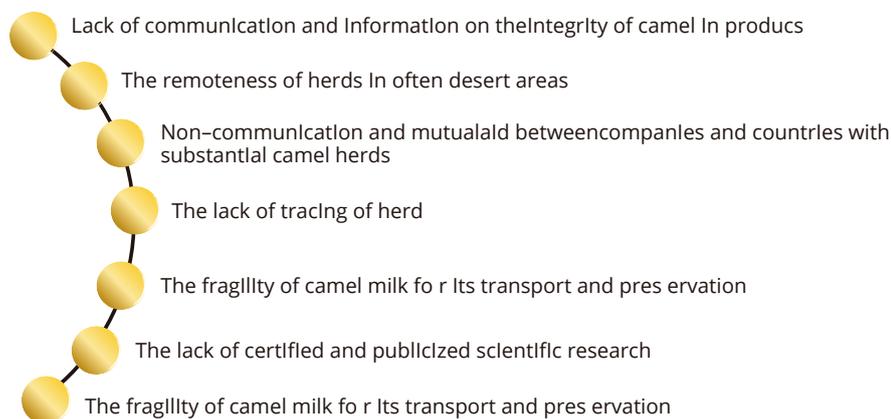

ABOUT CAMELCOIN

A brief introduction

The market for camelin products has enormous potential. However, unfortunately, it shows ignorance by the general public, and a significant part of the potential of the world's herds remains and will remain untapped if things stay that way, without a structural change, an alliance, a universal promotion, and official recognition.

While independent companies have been somewhat successful in a few countries, they do not do enough, contenting themselves with discerning customers already committed to the cause.

Some of the main obstacles to optimizing the production of camel products and the global recognition of their integrity are:

The CamelCoin team aims to create and develop a cryptocurrency (CamelCoin), design its own information exchange network (CameLink blockchain), and facilitate the democratization and recognition of camel products in the world.

This triple solution will collectively help support the economic development of all activities revolving around camelids, stimulate innovation in all sectors of these activities (food, cosmetics, tourism, textiles, sports, etc.) and improve the position of these markets on the global plan as well as to create new income-generating activities in those particular areas that are difficult

OUR VISION

We have found a solution to combat all these problems: a cryptocurrency based in the Sahara near the most considerable livestock and wild, in an environment full of economic growth with all the necessary means and knowledge.

THE CAMELCOIN PROJECT

To meet these significant challenges and achieve these goals, the camelcoin team has launched several projects working together to support, promote and promote recognition of camelin products globally and strengthen innovations and their impact on an emerging economy

THE CAMELCOIN

Camelcoin is a cryptocurrency created to develop the economic activities of camelin products around the world and their impact on disadvantaged rural areas in terms of employment and human and ecological development. It guarantees secure financing for development projects and traceability of funds to avoid any diversion of any kind thanks to blockchain technology.

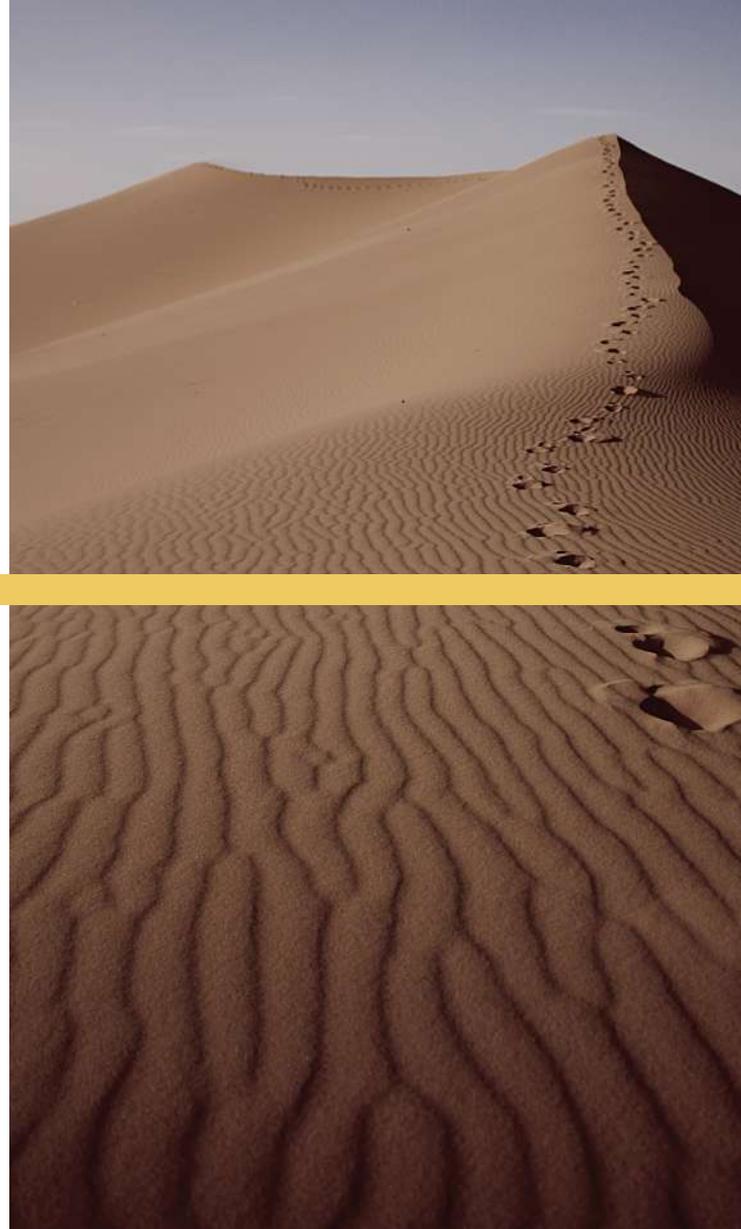

THE CAMELINK BLOCKCHAIN

The concept of industry 4.0 or industry of the future corresponds to a new way of organizing the means of production. This new industry asserts itself as the convergence of the virtual world, digital design, management (operations, finance, and marketing) with real- world products and objects.

This is one of the vital points of the CamelCoin project and a significant challenge. The Camelcoin, the first token ERC20 on the ethereum blockchain, will migrate to a faster blockchain and be fully involved in the camelLink project's values

TOWARDS THE REBIRTH OF THE SILK ROAD VERSION 4 . 0

Only the United Arab Emirates has received international approvals for the trade-in camel products mainly due to a lack of information and global coordination. It is time for African, American, Asian, and Australian players to get out of their local production and democratize their excellent products.

Through CamelCoin and blockchain technology, we will create the CameLink ecosystem, which, as the name suggests, will connect and facilitate communication between all players in Camelin products worldwide. Breeders, manufacturers, researchers, distributors, users, etc. everyone will be able to have a global vision detailed throughout the production chain, from the location of herds to the nutritional quality of products, to a view of animal welfare and processing techniques.

THE CAMELINK BLOCKCHAIN

In addition to the exchanges, the CameLink will also ensure creating a quality label and rapid advances in research and innovation through a reliable, updated, and tamper-proof database.

CameLink will also be an international laboratory in conjunction with the African Agricultural Research Centre that will make significant progress in the areas of camel milk preservation, the therapeutic use of camel urine against cancer, and other autoimmune diseases in various processes (capsules, powder, creams, etc.), research on the use of camel milk in the fight against autism. The use of dheroua (camel hump fat) against all gastric diseases and skin diseases, the effectiveness of camelin products against diabetes, and cholesterol scourges.

The laboratory will become a world reference. Every breeder or manufacturer of camelin products on the planet will be able to have their products analyzed free of charge by DHL in 48 hours; the credit will go to CamelCoin's development funds to facilitate their administrative procedures international trade.

All international laboratory results can be inserted, verified, validated, and approved in the CameLink blockchain to become irrefutable and absolute

The potential and integrity of camelin products have been known for millennia. Unfortunately, today, this ancestral knowledge is buried under a mass of data and, due to a lack of information and promotion, it has remained cloistered in the breeding communities and has spread only minimally in the discerning Muslim community. We estimate that only 10% of camel milk production is used today for food and commercial purposes, with the rest lost forever. It is time for things to change.

CamelCoin and CameLink provide a platform where we will teach, raise awareness, transmit what blockchain technology is, how it is revolutionary, and how it will change millions of people's daily lives. Many projects, new ideas, and valuable information can be correlated and thus assisted in their creation and launch to generate income-generating activities while providing medical, health, and wellness solutions to an entire population that does not find its needs in the leading products on the markets.

LES AVANTAGES DU CAMELCOIN

THE RETURN ON INVESTMENT:

1/4 of the actual profits on the funded projects will go back to CamelCoin to continue to finance and develop other projects, which will allow continuity of funds, an increase in capital, and therefore an increase in the intrinsic value of CamelCoin.

BUILDING TRUST AND CONFIDENTIALITY:

smart contracts will disable exploitation, corruption, animal abuse, and other abusive business practices. Camelcoin provides users with high security and privacy standards

ADDITIONAL ADVANTAGES :

CamelCoin users receive special assistance from a team of experts who work with them on any problem they may encounter. A team is also available to assist in the investment during the private sale and the ICO to facilitate CamelCoin tokens' purchase.

CamelCoin is committed to shifting the financial progress of all players in the sector from a withdrawn and community model, when it is not non-existent, to a model that directly assists entrepreneurs by reaching out to them and offering them a system of financing, control, and management assistance in a perfected way and free of cost.

This will unlock the massive commercial potential of the camelin market and create hundreds of thousands of quality and recognized jobs around the world and mainly in Africa.

HOW DOES IT WORK?

RESOLVING THE SHORTAGE OF FUNDS WITH CRYPTO.

The most common problem with starting a business or bringing an idea to fruition is financing. Lack of finance wastes human potential and leads to underuse or exploitation by third parties of natural resources and raw materials. This is very true in the case of camels. Herders, often nomadic or guardians, often underpaid outsiders, exploit resources such as milk or urine only for personal use, and the vast majority of these precious materials go unused and are lost forever. Alternatively, in other cases, when they sell their animals for meat, third parties will exploit the fat of the camels and sell it at a high price. Thanks to the support, financing, and monitoring of fair trade, CamelCoin will ensure income and a better quality of life for the leading partners.

Banks often refuse to lend money to those "who can do the most," these thousands of entrepreneurs in camel products thus find themselves deprived of capital, mainly on the African continent, they are "those who could get out. 'Africa of poverty if we gave them half a chance.' A report from the financial times points out that "reducing the risk perception of private capital concerning investment in Africa and African entrepreneurs should be the most important goal." This is precisely the idea behind the creation of Camelcoin.

CAMELINS PRODUCTS

CAMELINK

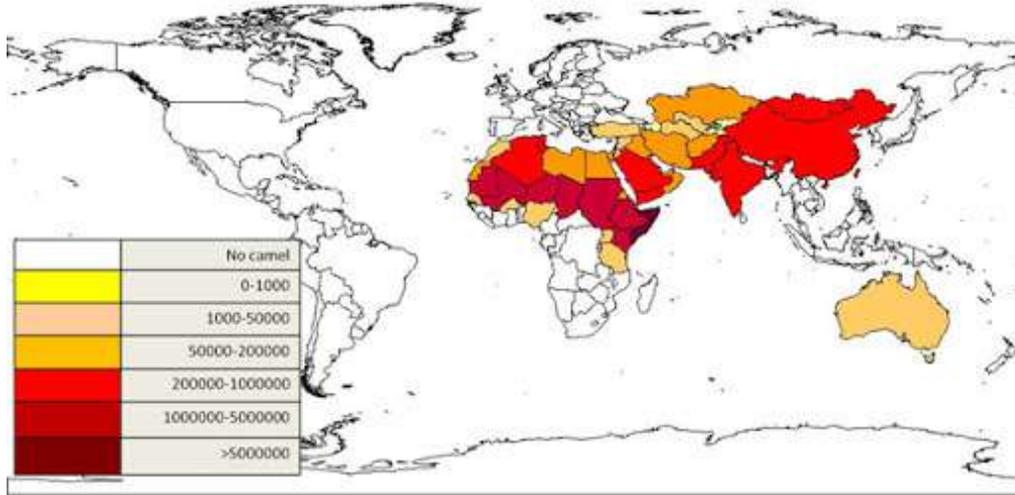

There is no shortage of reviews on the medicinal and therapeutic "integrity" of camel's milk or urine in the scientific literature that is not burdened enough with a critical reading of the published results. Many researchers love their object of study so much that they tend to prove their certainties through experiments, which are often open to discussion, as attested by the article by Mihic et al., 2016 (The Therapeutic Effects of Camel Milk. A Systematic Review of Animal and Human Trials in Journal of Evidence-Based Complementary & Alternative Medicine, 21(4),110-126)

THE SOLUTION TO THE DEMOCRATIZATION OF CAMEL PRODUCTS !

Conclusion is clear: "the evidence of an effect is limited by the lack of trials relevant to avoid many biases. Of the animal models studied, most reported only surrogate results, and many statistical tests are inappropriate, increasing the risk of errors. Moreover, most of the results reported have preliminary efficacy and safety criteria".

Therefore, we will take the recent review of Galil et al., 2016, with caution (The unique medicinal properties of camel products: A review of the scientific evidence, Journal of Taibah University Medical Sciences, <http://dx.doi.org/10.1016/j.jtumed.2015.12.007>). The effects of camel milk and urine on diabetes, cancer, chronic hepatitis, and hepatitis C and allergies are reviewed. The authors then look at the "candidate molecules" present in camel products that may explain these effects: lactoferrin and immunoglobulins.

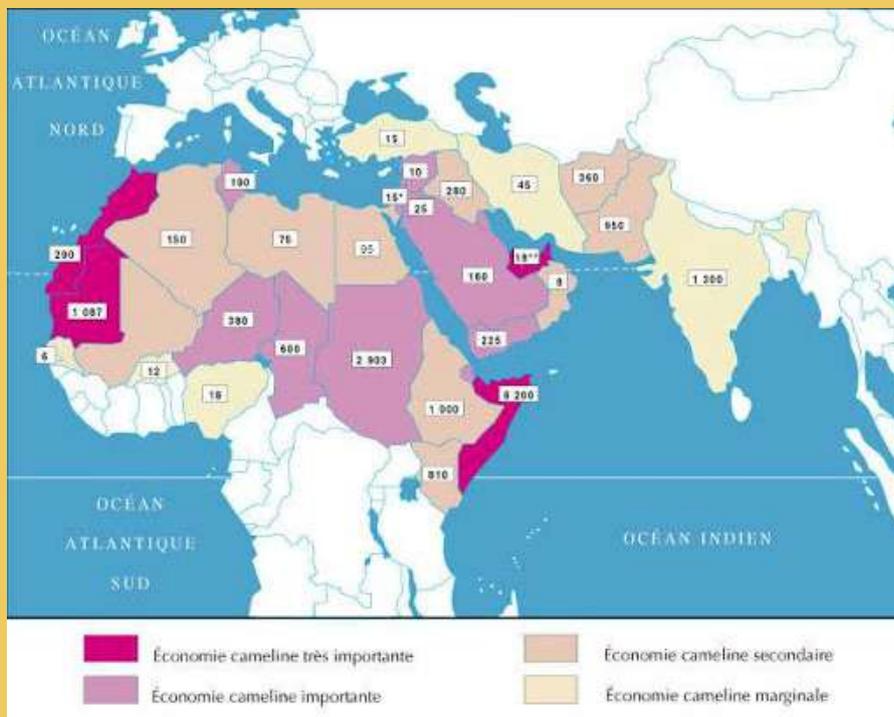

CamelLink and its objective and independent laboratory is the missing link. Thus through the research, dissemination, and publication of official results that will be engraved and unfalsifiable on the blockchain, scientists of the world will be able to benefit together and in real-time from all advances and discoveries in order to be able to test them in other conditions or on other species and thus have real results, which will have a logical impact on the spread of camel products and a direct consequence on the course of CamelCoin.

We can see on this map the location of camels in the world.

The largest of the population is in countries that are developing economically. The whole and sustainable exploitation of camel herds is undoubtedly part of the solution.

Indeed, we can also observe on the other map that the economic activities due to the exploitation of herds are not proportional to the number of camels present in the territory; this proves that it requires urgent and persuasive development.

CAMEL NUMBERS IN AFRICAN AND ASIAN (IN THOUSANDS OF HEADS)

Besides, most economic activities linked to camelids generally remain a local economy based on meat for immediate consumption.

CAMELINS PRODUCTS

THE MILK

POWDER

The first large-scale camel milk freeze-drying station in Africa is expected to open in the Moroccan Sahara, with the camélis company already being tested on the field. CamelCoin will finance its industrial-scale expansion as well as the tests needed for international commercialization.

PURE

The first mobile camel milk harvesting units are expected to be established in the Moroccan Sahara, Somalia, and Ethiopia.

TRANSFORMED

CamelCoin will initially finance the expansion and upgrade to the international sanitary standards of the world's only camel milk jam factory, Carajmel, in the Moroccan Sahara.

COSMETIC

CamelCoin will fund several women's cooperatives that manufacture gold and already many cosmetics based on camel milk, obtain the missing laboratory tests for the worldwide dissemination of these and ensure the logistics for export.

CAMELINS PRODUCTS

THE FAT
(OR DHEROUA)

PURE

CamelCoin and CameLink will ensure the raw material and fair trade's traceability by directly connecting breeders and processing laboratories.

TRANSFORMED

Dheroua can be used in many forms to manufacture medicines and substitute for unsavoury fats in many food products' composition.

COSMETIC

Camelcoin will help develop these products and develop other cooperatives in other countries, including Mali and Libya, in creating income-generating activities.

CAMELINS PRODUCTS

THE URINE

PURE

Tradition has it that camel urine has therapeutic properties put to fair use by all the nomadic camels on the planet. Camel urine is one of the ingredients of traditional pharmacopeia in many countries. In the Arabian Peninsula, patients consume camel urine at a rate of 100ml/d, either alone or mixed with camel milk. Such a cure is supposed to solve or help the treatment of a large number of diseases. Historically, the therapeutic use of camel urine is ancient and is even mentioned in the Koran. Avicenna (980-1037), one of the most excellent doctors of medieval times, advocated its use.

Tradition has it that camel urine is used to treat skin diseases such as ringworm, scabies or skin abscesses, toothache, eye ailments, snake bites, and any pain in the abdomen (especially stomach pains), and ulcers.

CAMELINS PRODUCTS

SPORT

RALLYES

Create a "Camelcoin Rally," which in addition to the engines will offer a special enduro on the back of a camel, and other events exploiting desert resources such as sandboarding or kitesurfing will serve as a promotional springboard to the project and will impact the course of Camelcoin thanks to the presence of big names in motorsport.

ELITE STUDS

Thanks to blockchain technology and herds' tracing, it will be easier to identify the individuals most suitable for running, make specific breedings for this sport, create elite studs, and possibly improve genetic research and crosses

CAMELINS PRODUCTS

WOOL

TEXTILE

CamelCoin and CameLink will revitalize the camel textile industry in Africa and South America and fund research into different wools' insulation and urban planning properties.

PAPER

Ecological production and primarily pointing out the multi-use value allowed by camelin breeding in the country. CamelCoin and CameLink will carry out the necessary work to develop, sustain and industrialize these techniques.

CAMELINS PRODUCTS

HEALTH

The creation of the CamelPharm brand and label will allow worldwide recognition and popularization of camel care products in all their forms. It is a widely held but incorrect belief that traditional currencies are less volatile and more stable than any given virtual currency when it is precisely the opposite. Physical currencies are undeniably linked to global geopolitical changes, and any slight disruption of one of the system's factors leads to the total discredit of a centralized monetary form. These factors are often political for some or difficult to identify for others.

Virtual currencies, which either have an asset supporting them (security tokens or stable coins) on the one hand or offer a specific utility on the other, can help create a financial system that is not affected by wars or economic pressures created through sanctions or boycotts.

Credit risk is an important issue that we hope to address via Camelcoin. By stabilizing the currency by introducing a cryptocurrency supported by a blockchain system, we will improve confidence in partnerships and collaborations involving foreign companies. This will stimulate economic growth in all areas and level the playing field for new entrepreneurs hoping to participate in global markets. The growth of a Cryptocurrency based in the Sahara will not change the way we conduct transactions.

It will also lead to the growth of the world's camelin market economy. Moreover, what a dream to rediscover the economic power of the Silk Road, which has been at the heart of international trade for millennia with its caravans, thanks to Blockchain technology connecting all the camels of the world.

A decentralized currency based in Africa will further encourage this growth by facilitating cryptocurrencies' daily use in personal and commercial transactions. Camelcoin also encourages the use and democratization of blockchain in underserved market sectors by providing project founders with the technical and logistical infrastructure through CameLink to succeed locally and globally. The security offered by blockchain technology and the convenience and financial power of cryptocurrencies will also become the norm in most parts of the world.

By encouraging the widespread use of Camelcoin and its CameLink network, we can guarantee the growth of camelin products and the corner's development when major monetary transformation occurs, and we will then serve as pioneers and reference.

CAMELINS PRODUCTS

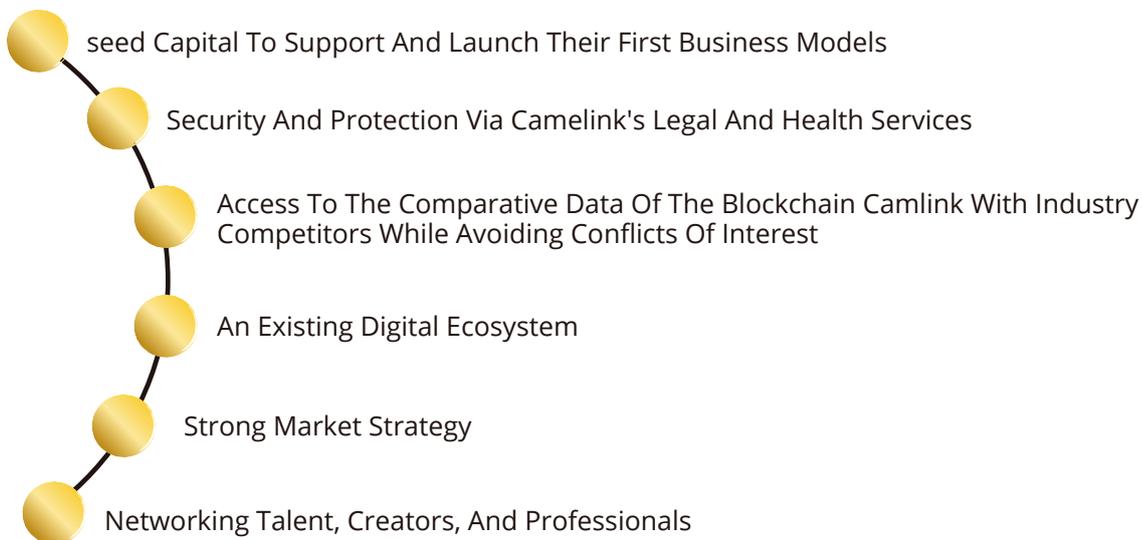

HEALTH

By encouraging new businesses, Camelcoin provides a solid foundation for them to grow quickly, safely, and cheaply. Allowing these companies to use camelcoin and CameLink's database provides a strong ecosystem so that new entrepreneurs can grow quickly and become familiar with blockchain technology safely.

This will allow The Camelcoin to establish itself as a benchmark economic token with long-term value.

CameLink will provide strategic partnerships, professional advice, legal and health information, etc.

The benefits for the players of the camel products will be numerous:

In conclusion, CamelCoin is the missing link to the global growth of the entire camelin products industry. Thanks to blockchain technology, it will ensure quality players - from breeders to distributors - who, through a short and responsible circuit, will allow a new clientele to take advantage of the integrity that has come straight from the deserts of the world. While benefiting from a quality label of excellence and indisputable, a new tracking, and new affordable rates thanks to the global network of the Blockchain CameLink and the sharp increase in production.

Powered by

TOKENOMIQUES

Value of public services camelcoin (L M C) :

A total of 17000000 camelcoin tokens were created on the ethereum blockchain Camelcoin's main objective is to provide development support to all players in camelin products, from production to distribution, and to serve as our global business model's backbone. Camelcoin provides access to CamelLink's services CMLs have been generated in limited numbers to avoid inflation

For a cryptocurrency to succeed, it must be the engine of a sustainable economy - which is why camelcoin aims to strengthen economic performance in its field and encourages all actors and participants in the project to accept and use CML as a bargaining chip. Buying products or paying suppliers, or charging for camelcoin services will offer significant benefits and positively influence the LMC's price by creating liquidity volumes.

Reasons for the success of the crypto-economy CamelCoin

Like all economic systems, ours is based on supply and demand.

Our project's core is to increase distribution and customer base by generating profits, which depends on customers' distribution/ demand ratio.

Therefore, the CamelCoin crypto-economy's primary objective is to manage the distribution of its services and services and their users effectively.

The value of The CamelCoin lies in several points

- At the end of the ICO will then occur what is called the phenomenon of scarcity, so the only way to acquire CamelCoin again will be on the secondary market through the exchange platforms, so, inevitably, Camelcoin will trade at a higher price than that of its launch.
- When the number of developed projects accepting Camelcoin as a bargaining chip, as well as the number of users of products from these projects around the world, will increase, our ability to buy Camelcoins on exchange platforms and then resell them will also increase, which will result in an automatic value gain of Camelcoin over time.
- Camelcoin will circulate among all the project players, from breeders to consumers to producers and distributors, thus creating an integrated economy and a local value gain.
- The reputation of our brand and the development of a community are essential factors of transparency. The CamelCoin project will work towards community development through participation in forums, social media involvement, and the implementation of advertisements.

- In the early days of cryptocurrencies, experiences and novelties were exchanged mainly through bitcoin talk and Reddit. Today, our team will ensure a presence wherever necessary and be extremely active with the general public to answer all questions in a personalized and humane manner.
- Bringing consumer interest is an integral part of our marketing plan and has been budgeted.
- The promotion of Camelcoin will also be done through personalities, companies, organizations, and reference events in the camelin world.
- A Bounty campaign is set up to ensure our project's communication among all stakeholders, the community, and the general public. Up to 2,000,000 CMLs will be assigned to this campaign.

Participants will receive them as a reward for their help in promoting the project. They will have to justify their contribution and their identity. They should also be in close contact with the team and be regularly informed of new developments.

PHASES OF ICO (INITIAL COIN OFFERING)

The ICO will take place in two major phases:

A pre-sale and then a crowdsale

Pre-sale is the opening to the public of access to the CML token for the first time. We want to reward those who will invest first by offering them more tokens.

The sooner you invest, the more tokens you receive:

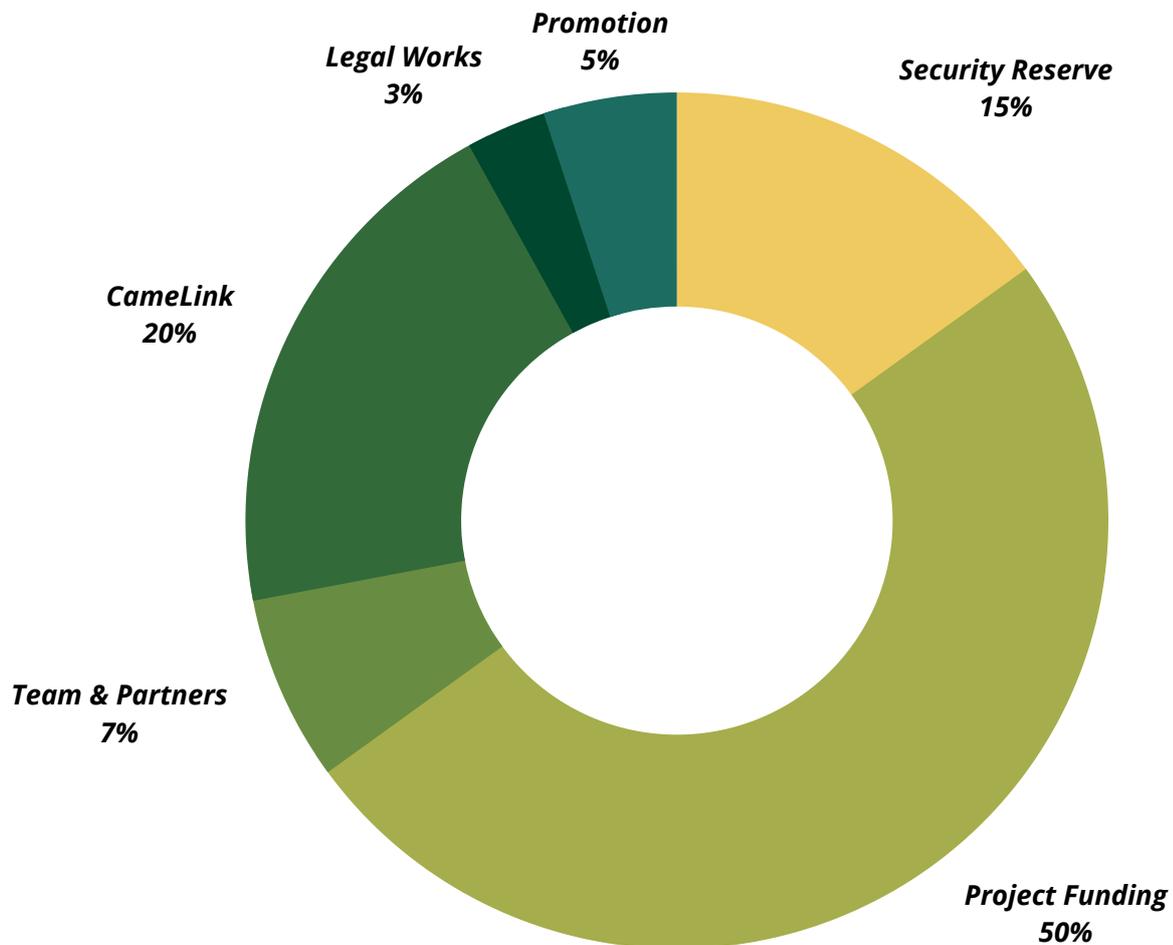

Crowdsale is the main event in which everyone can take part in. As with pre-sale, the earlier you invest, the more Camelcoins you receive, you will find more information about the Camelcoin roadmap.

PRE-SALE BONUS

- A 15% bonus in the form of tokens will be awarded to each contributor until we reach the \$5 million soft cap.
- A 5% bonus in the form of tokens will then be awarded to each contributor until we reach the sale of 100 million tokens, which is a little below the hard pre-sale cap.

DISTRIBUTION DES JETONS

- ICO was set at \$5,000,000 (5 millions of dollars)
- We calculated this figure based on seed capital financing of some projects on four continents.
- The hard cap of this ICO has been set at \$75,000,000 \$ (75 millions of dollars)
- As with soft cap, this amount was calculated by estimating the amount needed to complete this project, finance laboratory, and allow us to look further by supporting and financing as many projects per year.
- A total, 170,000,000 CamelCoin tokens were generated. Crowdsale information start of token sales: February 2021; duration: 60 jours
- token symbole: CML
- softcap : \$5 millions hardcap : \$75 millions
- Token price: 300 CML 1ethereum (ETH)

FEUILLE DE ROUTE

Dates importantes

POUNDS DE L'ICO

- **ROUND 1** until May 31, 2021 token at \$0.35, blockchain development CameLink
- **ROUND 2** until August 31, 2021 token at \$0.45, the launch of Carajmel development
- **ROUND 3** until October 31, 2021 token at \$0.60, development of camelin projects in Somalia
- **ROUND 4** until December 31, 2021 token at \$0.75, the launch of centralized information on the CameLink blockchain
